BROOKS PEER & CAREGIVER SUPPORT PROGRAM
As the Southeast's regional partner to the Christopher and Dana Reeve Foundation, Brooks offers a Peer and Caregiver Mentoring Program. Patients or caregivers are paired with someone who has experienced the impact of a spinal cord injury and can provide support, guidance and advice.

BROOKS[®]
Rehabilitation

SPINAL CORD INJURY PROGRAM

Brooks has the experience and experts to help individuals with spinal cord injuries thrive.

At Brooks Rehabilitation, we have more than 45 years of expertise in treating spinal cord injuries. Brooks provides more specialized, focused rehabilitation than any other provider in the region, offering the most innovative, scientifically supported treatments available. We know that a spinal cord injury affects each person differently. That's why we offer an individualized plan of care focused on each patient's specific goals and needs.

Staff Expertise

At Brooks, patients are cared for by a designated team of experts in spinal cord injury. Depending on individual needs, the customized rehabilitation team includes full-time professionals such as:

- A physician specializing in Physical Medicine and Rehabilitation to oversee care
- Physical therapists to help strengthen muscles to improve balance and coordination, transfers, wheelchair mobility and walking
- Occupational therapists who focus on increasing hand and arm use to improve activities of daily living such as dressing, bathing, eating and writing
- Speech-language pathologists to help with the ability to communicate, and the ability to swallow safely
- Rehabilitation psychologists who provide both assessment and treatment during the recovery process; this can include individual treatment, group counseling and/or education classes
- Certified rehabilitation nurses who are specially trained in spinal cord injury care and education
- Case managers to coordinate the inpatient stay and assist in discharge plans, including follow-up visits as an outpatient
- Therapeutic recreation to introduce activities adapted to patient abilities and community outings to practice those skills
- Trained and certified peer and caregiver coaches, who share real-life experiences on how to live successfully with a spinal cord injury

What makes the Spinal Cord Injury Program at Brooks unique?

- A team of highly trained specialists working together to help achieve the most complete recovery possible
- Innovative technology with proven outcomes
- Ongoing research in spinal cord injury treatment techniques
- A full system of care—from inpatient to outpatient to post-rehabilitation exercise—to meet each patient's needs at all stages of recovery
- Specialized programs to meet the unique needs of a patient after a spinal cord injury, such as Driver Rehabilitation, a Wheelchair Clinic, Peer Mentoring, the Neuro Recovery Centers and Adaptive Sports & Recreation

State-of-the-Art Technology

Research shows that patients with a spinal cord injury have a better chance of recovering at a higher level when they are given intense, task specific rehabilitation. Our Spinal Cord Injury Program is based on these scientifically proven techniques. Brooks offers the newest state-of-the-art equipment in the region, such as:

- CYBERDYNE's Medical Hybrid Assistive Limb (HAL) technology, the world's first robotic medical device that has been shown to improve a patient's ability to walk
- The Zero G overhead track system, which allows patients to perform functional tasks in a body weight supported environment
- Innovative robot-assisted therapy, which encourages intensive, repetitive, activity-based arm movements, allowing patients to complete a variety of computer-based games to simulate practical activities
- A variety of equipment that uses functional electrical stimulation to move muscles, allowing for greater recovery and maintenance of muscle tone
