

BROOKS[®]
Rehabilitation

EyeStim Study

Are you or someone you know experiencing trouble opening or closing your eye? This study evaluates a non-invasive means of improving eyelid opening and closing by applying a previously demonstrated safe and effective neuromuscular electrical stimulation (NMES) intervention to the muscles controlling eyelid movement.

Q: Who is eligible to participate?

Individuals who:

- Are experiencing trouble opening or closing their eye due to nerve injury
- Are greater than 18 years of age
- Able to read and communicate in English
