

Virtual Inter-professional (VIP) Consultation Study

WHAT IS THE PURPOSE OF THIS RESEARCH STUDY?

The expansion of telehealth during the pandemic has increased the awareness of potential benefits of virtual healthcare services as well as exposed some knowledge gaps among some healthcare providers in adapting to this technology. This study aims to address this gap by exploring the barriers and benefits of a Virtual Inter-professional (VIP) Consultation experience where learners from a variety of healthcare professions can collaborate on actual patient cases using telehealth communications.

ABOUT THE STUDY

- ◇ Participants must be at least 18 years old
- ◇ Participants will use their own smart device to engage in a 1 hour long virtual inter-professional consultation session, with a variety of healthcare professionals
- ◇ These healthcare professionals will work together to create a mock inter-professional plan of care
- ◇ The virtual consultation session is **not an actual medical visit**. It is part of an education program for these healthcare professionals.
- ◇ Eligible participants will receive a \$100 gift card for their involvement in the study.
