Beyond Recovery

Brooks Rehabilitation offers a full system of care—from inpatient to outpatient to post-rehabilitation programs—to meet each patient’s needs at all stages of recovery. The depth and breadth of services offered at Brooks mean pediatric patients receive highly personalized care focused on their specific goals.

Our pediatric therapists have specialized training and the unique skills necessary to address developmental disabilities and traumatic injuries from infancy to adulthood. We merge innovative technology and customized treatment plans designed with families to provide the best outcomes for all children.

Children (ages 5+) and families receive 24/7 age appropriate care at this facility from a variety of medical and rehabilitation personnel. Through our full system of care, we are able to bridge the transitions between childhood, adolescence and adulthood at any stage of illness or injury.
