

PARTICIPANTS NEEDED FOR AFO STUDY

Who: Adults at least three months post-stroke who have been prescribed a semi-rigid or custom-made articulating AFO and wear their AFO for all primary activities outside the house.

What: You will participate in 11 visits to a clinic over 20-24 weeks (32 weeks maximum) and use three different AFOs. After using each AFO, you will answer questionnaires and undergo performance tests (e.g., walking and balance tests), as well as other measurements such as your strength and joint motion.

Where: Each visit will last between 2-4 hours at the Brooks Rehabilitation Motion Analysis Center.

Why: This study will help us improve the quality of life for people who have had a stroke by updating guidelines for clinicians regarding AFO fit. Plus, you will receive payment for participating!
