

RESPARK STUDY

Purpose of the study

This study will determine how safe and effective a new, non-invasive treatment using the Q Therapeutic System (BQ 3.0) may be in improving arm and hand function in people with chronic stroke.

About the study

- Interventions include low-intensity and low-frequency electromagnetic stimulation and arm and hand exercises
- 60 sessions of stimulation and exercise performed mainly in your own home
- Pre and post measures to assess arm and mobility function
- Up to \$500 for completion of the study

You may qualify if you:

- Are 18-80 years old
- Had a stroke between 6 months and 5 years ago
- Have some arm movement in your affected arm and hand
- Are otherwise healthy
- Other eligibility criteria will apply
