

Creating a community of researchers, clinical professionals and patients transforming rehabilitation through innovations in science, technology and care.

Brooks Clinical Integration and Research is committed to advancing rehabilitation science, technology and care through research and developing the most effective therapies for our patients. Our clinical research programs are focused on patient populations who have experienced neurological injuries such as stroke, brain injury, or spinal cord injury and individuals who are battling musculoskeletal pain and other disabling conditions.

We partner with leading experts in academia, clinical care and the industry to offer individuals the opportunity to participate in innovative research studies that focus on solving real-world problems that patients and healthcare professionals experience in rehabilitation. Our skilled team is driven by a mission to generate new evidence and integrate the latest research discoveries into clinical practice.

OUR AREAS OF FOCUS

Improving health, mobility, walking recovery, and breathing function following neurologic injury

Utilizing cutting-edge technologies and interventions to improve quality of care

Improving delivery of care for musculoskeletal pain and disabling conditions
